# Server Room & Data Center Decommissioning

Many on-premise server rooms and early purpose-build enterprise data centers are approaching their end-of-life. Twenty year old facilities are simply not well-suited for today's high density IT infrastructure. For this reason, owners and operators are electing to decommission legacy sites that are inefficient to operate, have limited capacity and are prone to unexpected failures.

Compu Dynamics is the Mid-Atlantic's leader in building, renovating, and decommissioning data centers. Whether you want to update your site to modern computing standards or repurpose your data center space for another use, we can provide turnkey solutions to assist with your transformation.

Step One

- Perform Engineering Site Assessment
- Evaluate Redevelopment Options
- Develop a Decom Strategy
- Create a Phasing Plan/Schedule
- Prepare Design-Build Pricing

Step Two

- Prepare Design Documents
- Launch the Decom/Restoration
- Remediate Hazardous Materials
- Recycle Equipment, Reclaim Materials
- Restore or Upgrade Building Systems
